- Collaborate with Tier 2 support to effectively escalate and resolve complex problems.
- Maintain high productivity by successfully triaging and resolving over 30 tickets per day.

PERSONAL PROJECTS

Weather Website

Website: <https://oadeokee.github.io/weathercast/>

- **Technologies used:** OpenWeatherMaps API, JavaScript, HTML, CSS, Git, GitHub
- Developed a weather site that allows users to see the current weather and forecast of their location.
- Enabled ability for users to search for a location using city name or zip code and switch between Fahrenheit and Celsius.
- Implemented responsive web design which responds to the user's behavior based on screen size and browser.

Android Recipe App

GitHub Repository: https://github.com/oadeokee/Recipe_Finder#readme

- **Technologies used:** MealDB API, Java, GitHub, Android Studio
- Developed an android recipe app that enabled users to easily search for recipes and manage their own recipes.
- Integrated the MealDB API to provide users with access to multiple recipes including the option to view related YouTube videos for each recipe.
- Utilized an SQLite Database within the app, allowing users to add and store their personalized recipes.
